Campaign: Forklift safety procedure v3 — acknowledgement [SAMPLE — synthetic data, not a real customer]

Forklift safety procedure v3

SAMPLE — synthetic data, not a real customer. This document, the people in it, their signatures and every timestamp are invented to show the evidence format. Nothing here describes a real organisation.

1. Only operators holding a current in-house forklift certificate may operate a counterbalance or reach truck. Certificates are renewed every three years.
2. Complete the pre-use inspection checklist at the start of every shift and report any defect to the shift supervisor before use. A truck with a reported defect must not be driven.
3. Loads must be carried low and tilted back; never exceed the rated capacity shown on the data plate. Pedestrians have priority in all marked walkways.
4. Report every incident, including near misses, on the same shift.

Proof of acknowledgement
